## INTRAVENOUS INFUSION CHART

|             |                      |
|-------------|----------------------|
| <b>DRUG</b> | <b>PHENYLEphrine</b> |
|-------------|----------------------|

|                               |                   |
|-------------------------------|-------------------|
| <b>STANDARD CONCENTRATION</b> | <b>100 mcg/mL</b> |
|-------------------------------|-------------------|

|                  |   |
|------------------|---|
| <b>ADMIXTURE</b> | add 10 mg PHENYLEphrine<br>(1 mL of 10 mg/mL solution) to<br>D5W 100 mL bag |
|------------------|---|

| <b>DOSE<br/>mcg/min</b> | <b>INFUSION RATE<br/>mL/hour</b> |
|-------------------------|----------------------------------|
| 10                      | 6                                |
| 20                      | 12                               |
| 30                      | 18                               |
| 40                      | 24                               |
| 50                      | 30                               |
| 60                      | 36                               |
| 70                      | 42                               |
| 80                      | 48                               |
| 90                      | 54                               |
| 100                     | 60                               |
| 110                     | 66                               |
| 120                     | 72                               |
| 130                     | 78                               |
| 140                     | 84                               |
| 150                     | 90                               |
| 160                     | 96                               |
| 170                     | 102                              |
| 180                     | 108                              |
| 190                     | 114                              |
| 200                     | 120                              |
