

epoprostenol infusion rates for concentration of 1000 ng/mL (= 1 mcg/mL)**(1000 ng/mL = 100 mcg epoprostenol in 100 mL)**

Fill in the weight (kg) and calculate the INFUSION RATE (mL/hour) = [weight (kg) x rate (mL/kg/hour)]

Dose (ng/kg/minute)	Rate (mL/kg/hour)	Weight (kg)	Rate (mL/hour)
1	0.06		
2	0.12		
3	0.18		
4	0.24		
5	0.3		
6	0.36		
7	0.42		
8	0.48
