

**epoprostenol infusion rates for concentration of 15,000 ng/mL (= 15 mcg/mL)****(15,000 ng/mL = 1500 mcg epoprostenol in 100 mL)**

Fill in the weight (kg) and calculate the INFUSION RATE (mL/hour) = [weight (kg) x rate (mL/kg/hour)]

<b>dose (ng/kg/minute)</b>	<b>rate (mL/kg/hour)</b>	<b>weight (kg)</b>	<b>INFUSION RATE (mL/hour)</b>
