

epoprostenol infusion rates for concentration of 2500 ng/mL (= 2.5 mcg/mL)**(2500 ng/mL = 250 mcg epoprostenol in 100 mL)**

Fill in the weight (kg) and calculate the INFUSION RATE (mL/hour) = [weight (kg) x rate (mL/kg/hour)]

Dose (ng/kg/minute)	Rate (mL/kg/hour)	Weight (kg)	Rate (mL/hour)
