

Drug Delivery System – PERIOLIMEL 2.5 % E multi-chamber bag

Multi-chamber parenteral nutrition bags must be activated prior to administration. When you are ready:

1. Tear from top to open the overpouch.

2. Peel the front of the overpouch to reveal the PERIOLIMEL E bag. Inspect the bag to confirm individual chambers are intact.

3. Place the bag flat on a horizontal and clean surface with handle in front of you.

4. Lift the hanger area to remove solution from the upper bag. Roll the upper bag firmly until peel seals are fully open (about half way).

5. Mix by turning the bag upside-down at least 3 times.
